DOSSIER ID:

PB-0001-HEX

The Parallel Biome is an ongoing archival fiction project published through HEXFILED.

Each sub-issue is built around the work of a different contributing author: their fictional world, characters, and narrative material. These works are then reframed through a unified editorial structure consisting of recovered documents, institutional annotations, classified records, and fragmented archival material originating from parallel or non-linear worlds.

Contributors retain authorship of their original fiction. The editorial framework surrounding that material, including dossier construction, archival formatting, annotation systems, document sequencing, visual integration, and curatorial adaptation, is developed independently by HEXFILED as part of The Parallel Biome project itself.

The goal of The Parallel Biome is to present fictional worlds as recoverable evidence with partial histories reconstructed through conflicted records and state narratives.

Each entry functions as both a standalone work of fiction and as part of a larger ongoing archive.

The Overgrowth Chronicles, Volume I by Charles Ta is the first world to enter the archive.

The dossier is open. Analysis ongoing.

DOSSIER ID:

**ACCESS BRIEF**

**August 13, 2130 · GCS-SAT-05 Relay**

The records you are about to view were partially recovered by intelligence agents of the Global Control Syndicate (GCS) from an abandoned laboratory in the Alaskan Rainforest, formerly owned by the now-defunct Mendel-Strand Biosciences Corporation.

Due to the sensitive subject matter of these records in relation to the Black Eden Crisis and the Phantom Blossom Cataclysm—among other disasters involving genetically enhanced megaf flora, insect fauna, and microbial life—only members of the GCS Central Committee have been granted access to them in compliance with Article 3 of the Helix Accords.

Since the end of pre-Blossom civilization via contamination of 95% of all plant life on Earth, irreversible global cooling, infestations, diseases, and hunger, the five founding members of GCS (the Remnant States of America, the Heavenly Mandate, the Indian Confederacy, the Enclave of Brazil, and the United Republic of Siberia) have created a private task force designed to neutralize rogue organizations in violation of the Accords—with priority given to Mendel-Strand ex-personnel still active in remote regions around the world. These mercenary groups—known as MANTICORE units—have been trained in forest and jungle warfare to mitigate further propagation of adversarial vegetative intelligences into GCS's domed Citadels: the last bastions of human civilization.

Archival data maintained by former Mendel-Strand scientists may prove useful for ongoing combat operations against hostile botanical entities and megaswarm events involving insectoid megafauna. The continued existence of the human species remains uncertain. GCS remains committed to the absolute safety of planet Earth and to guiding the human race toward a state of ultimate biological and technological fitness.

► **LOADING ENTRY #001 — TRANSCRIPT — MENDEL-STRAND**  
**HOLOADVERT**

TYPE: Holographic Recruitment Advertisement — Corporate Distribution  
SUBJECTS: Dr. Jericho V. Nordstrand (President) / Dr. Tanya Mendel (VP)  
LOCATION: Bloom Tower Corporate HQ, Bitterroot Range, Montana  
DATE: June 22, 2073  
NOTE: Stage directions preserved from original holo-transcript.

*(A holo-feed projected by a drone camera pans over the interior of a vast multi-story greenhouse skyscraper teeming with genetically enhanced plant life. Quiet piano music plays in the background. The drone descends toward a man in his forties—trimmed beard as white as his lab coat, leaning against a gigantic tree of unnatural, chimerical composition. Attached to the tree's roots are giant pulmonary alveoli-like sacs grown to perform the same photosynthetic functions as plant stomata, but more efficiently. Black algae cover the bark, allowing it to absorb carbon at elevated rates.)*

**NORDSTRAND** (turning to face the viewer with a kind, gentle smile, pacing toward the drone):

"H... hello! I seem to have yet another visitor who wishes to meet me. It is so good to see you—welcome! The pleasure is all mine. My name is Jericho Nordstrand, Head Scientist and President of Mendel-Strand. And this is my beautiful, botanical garden: Genesis Prime.

"Do you like it? It is a marvel of science—the result of two decades of labor, passion, and dedication. Not from myself alone—heavens no—but from the collective efforts of all my employees, who made the company what it is today. Come. I will show you more of what my paradise has to offer, for this is only the beginning."

ACCESS LEVEL:

OMEGA

CLASSIFIED  
LEVEL OMEGA

*(The camera drone follows Dr. Nordstrand away from the breathing tree and over a cobblestone path. Long vines dangling from archways move aside as he walks beneath them.)*

PB-0001-HEX

"You know, my dreams to change the world first came to me when I was just a young molecular biologist fresh out of my PhD program in the 2050s. Back in those days, I was documenting the tragic disappearance of the Amazon Rainforest while on sabbatical in South America, and decided something had to be done to salvage life on Earth, no matter the cost—before the worst of climate change ended it for good.

"Months later, I met my future wife, Dr. Tanya Mendel, and together, we co-founded Mendel-Strand Biosciences—now one of the fastest-growing biotech and terraforming firms in the world. Ah—there's my dear Vice President now, tending to the scavenger flowers. Hello, love!"

*(The drone zooms out to reveal Dr. Mendel with her back to the camera, watering a colony of enormous Rafflesia-like plum-colored flowers with crude petroleum. Gardener droids and workers dump containers of industrial waste into the surrounding soil, which the hyperaccumulator plants eagerly absorb. Dr. Mendel turns, removes her gas mask, and walks toward Dr. Nordstrand with a smile.)*

**MENDEL** (delighted, waving at the drone camera, as if on cue):

"My husband can be quite the romantic—but what he says is true. After we married, we set out to change the world, one seed, one DNA sequence, at a time. We gathered the best scientific minds across the globe and made our case to politicians, the media, and economists. The Earth, we said, was warming past a point of no return. Such times called for drastic solutions. The world finally agreed.

"Now, twenty years later, we have made our dreams a reality."

*(The swamp behind them is full of plastic-fixating fungi connected via mycorrhizal networks grafted with animal nerve cells to bioluminescent willow trees. The trees pulse with light while sharing electrical signals with one another. Giant aquatic Venus flytraps rise from the riverbeds, melting islands of trash with acid. Workers in yellow hazmat suits detonate explosives against crystalline bamboo trees*

ACCESS LEVEL:

OMEGA

CLASSIFIED  
LEVEL OMEGA

*to stress-test them; the bamboo forms diamond shields from solid carbon, and the workers give a thumbs-up to the camera.)*

PB-0001-HEX

"From flytraps that can melt metal to bamboo that cannot be broken, we have revolutionized the genetic engineering industry. Because of us, global temperatures have finally started to stabilize. World hunger is at an all-time low. Our blue-green marble is becoming a safer place to live—for you and your children."

**NORDSTRAND:**

"But we're not finished with our mission yet, are we, honey?"

**MENDEL** (looking directly at the viewer):

"No. Far from done. And that's why we need you to join our team. People who care about the environment, about the beauty of life, and our future on this one planet we call home. People who matter.

"So, what are you waiting for? The clock is ticking, and the fate of Gaia herself hangs in the balance. Who knows? Maybe your work could mean the difference between a sustainable future for all—or no future at all."

*(Dr. Mendel rests her head on Dr. Nordstrand. The drone flies away, circles the carpel-like summit of Bloom Tower as it slowly opens like a flower, and hovers. Surrounding the radially symmetric metallic petal shells are regrown forests of the Bitterroot Range, bird calls and insect buzzing audible beneath a gorgeous sunrise in shades of red, orange, and purple. The holo-feed fades to white, presenting the hexagonal Mendel-Strand logo, a hologram contact number, and a fine-print statement at the bottom. A musical flourish of strings plays beneath the voiceover.)*

**DRAMATIC VOICEOVER:**

"Join us at Mendel-Strand Biosciences today. Don't delay."

ACCESS LEVEL:

OMEGA

*(The voiceover subsequently reads the fine-print disclaimer at the bottom of the holo-feed in under five seconds:)*

▶ **LOADING ENTRY #002** — INTERNAL MEMORANDUM — PROJECT  
**PHANTOM BLOSSOM**

PB-0001-HEX

INTERNAL MEMORANDUM · **RESTRICTED DISTRIBUTION**

DATE: Friday, May 13, 2078 — 10:30 AM MST  
TO: R&D / Biochemistry Division — Authorized Personnel Only  
FROM: President J. V. Nordstrand / VP T. Mendel  
RE: Q2 Performance / Board Directive / Project PB-01  
CLASSIFICATION: **RESTRICTED — DO NOT FORWARD OR DUPLICATE**

Associates —

Q1-Q2 2078 metrics reflect continued progress against baseline targets:

- Pacific and Atlantic Garbage Patches reduced 15% over five-year period.
- Global CO2 concentration held below 500 ppm.
- Amazon and Indonesian Rainforest reclamation at 12% of former territory.
- Heat-resistant crop programs operational: Algeria, Egypt, Saudi Arabia, Mongolia, Chile.

**However, Board of Directors meeting 05/12/2078 produced the following directive:**

Investor confidence is at critical low following the Madagascar incident, the Sydney Exhibition, the Legion of Abel attacks on our Italian branch, and associated legal exposure. Quarterly earnings remain adequate but below the threshold required to maintain investor commitment. The Board has issued a five-year window: substantially rehabilitate public image, accelerate operations, and demonstrate increased profit margins. Non-compliance will result in full funding withdrawal.

In response, Dr. Misaki Ishikawa (Senior Researcher, R&D) has proposed Project PHANTOM BLOSSOM (PB-01): a mutagenic retroviral agent capable of (a) stimulating plant growth and reproduction on an exponential scale via phytohormone pathway manipulation, and (b) embedding heritable modifications into host plant DNA for propagation across future generations. In theory, PB-01 could expedite our operations sufficiently to satisfy Board requirements.

PB-01 has been approved for development and testing. Review the attached biometric file at your earliest convenience.

▶ **LOADING ENTRY #003** — INTERCEPTED AUDIO LOG — **NORDSTRAND / RADCLIFFE**

DOSSIER ID:

PB-0001-HEX

TYPE: Intercepted Audio — UGenx Fruit Fly Surveillance Drone  
LOCATION: President Nordstrand's Office, Bloom Tower HQ  
DATE: October 24, 2081 — 4:00 PM MST  
SUBJECTS: Nordstrand, J. V. / Mendel, T. / Radcliffe, G. (R&D / Safety and Compliance)

**NORDSTRAND** (annoyed):

"Dr. Radcliffe, how many times must you come into my office before your pea-sized brain finally sees the light? For the last time—I am not shutting down the PB-01 program. Not now, not when we are so close to finally reversing climate change. Dr. Ishikawa and her colleagues have spent four brutal years in the Peruvian jungle developing and retesting PB-01. I am not about to let ten billion dollars, or their efforts, go to waste—especially because you are worried about hypothetical outcomes that may never occur. If they were likely, Dr. Ishikawa would have informed me. The fact she has not is proof enough of your foolishness."

**RADCLIFFE** (calm, measured):

"But that's just it, sir. I've run dozens of independent studies on the effects of PB-01 on plant, fungi, and animal cells. Approximately 35% of all cells exposed to high concentrations underwent catastrophic carcinogenic growth patterns—abnormal consumption of biomass substrate, unsustainable reproduction rates, irreversible symbiosis between PB-01 and host cells, and intoxication of surrounding cellular cultures. In simple terms, Mr. Nordstrand, you are inviting disaster upon the world if you go through with this. I am imploring you one last time—please, reconsider."

**NORDSTRAND** (angry):

"Perhaps some sacrifices are acceptable for the sake of the common good. The cost of not making them is too great. The Board of Directors has already

ACCESS LEVEL:

OMEGA

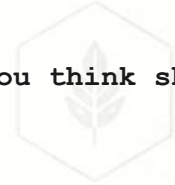

voted in favor of PB-01. I have no other choice. It is the only way I can save this Company and this dying planet—and I will not let you stand in my way."

DOSSIER ID:

PB-0001-HEX

**RADCLIFFE:**

"Sir, please. You don't understand. Dr. Ishikawa—she's not who you think she is."

**NORDSTRAND** (losing patience):

"I've heard enough. Dr. Radcliffe, your repeated attempts to disrupt PB-01 research have contributed to a negative work environment and threatened the Company's financial stability. Pack your belongings and leave your office within the hour. You are hereby terminated."

**RADCLIFFE** (barely holding composure):

"Mr. Nordstrand—I have a wife and a daughter. Please, sir. Don't do this."

**MENDEL:**

"Mr. Nordstrand, calm down. Surely Dr. Radcliffe deserves a second chance. His intentions are noble—he is performing his job. He could be reassigned or—"

**NORDSTRAND** (standing, cutting her off):

"My mind is made up. Leave now, Dr. Radcliffe, before I call security. You have failed as a scientist and I do not wish to see you here again. Get out."

**RADCLIFFE** (backing away):

"No, Mr. President. It is you who has failed. You who will bring the Earth to its knees if nothing is done to stop you. Madagascar was a warning—one you didn't bother heeding. Deep down, you think you're God. That you'll be

ACCESS LEVEL:

OMEGA

the hero who saved the world. That's not going to happen. Goodbye, Mr. President. May you live the rest of your days regretting this."

DOSSIER ID:

PB-0001-HEX

*(Sound of a heavy door slamming. Silence. Then Mendel, quietly:)*

**MENDEL:**

"That was a horrible decision. Radcliffe was one of the best researchers on this team. You got rid of him because he threatened your ego, and you couldn't handle what he had to say. This isn't the man I married. You used to be kinder. You used to listen. What happened to you?"

**NORDSTRAND:**

"Honey, I—"

*(Sound of Mendel pushing him away.)*

**MENDEL:**

"Don't. I'm going away for a while. Hologram me back when you've returned to your senses."

*(Sound of a second door. Nordstrand alone. A long silence, then the sound of objects being thrown. Then, quietly, crying.)*

[ GCS ANNOTATION — ENTRY #003 ]

Surveillance drone identified as UGenx proprietary model FS-7 (fruit fly class). Presence of UGenx surveillance inside Mendel-Strand executive quarters consistent with ongoing corporate espionage operation. Radcliffe's claim regarding Dr. Ishikawa's identity remains unverified in this dossier. See GCS-ISH-001 (Level 5 clearance required).

# WARNING

This area has been evacuated due to a high prevalence of insect megafauna. **DO NOT** approach if you hear buzzing or screaming, or if you see megafauna feeding on contaminated local biomass. Always wear insect repellent clothing.

GLOBAL CONTROL SYNDICATE

# CAUTION

High concentrations of oxygen, microbial plankton, pollen, and spores in the air may cause asphyxiation, "fungal lung", and / or explosive fires in the presence of flammable material.

**DO NOT:**

Proceed without wearing a GCS modified gas mask.

Use lethal firearms that may ignite the air.

Subject: Operation  
Withering Wood

Description:  
UGenX, backed by a coalition of the five major global powers, deployed strategic low-yield nuclear weapons tipped with enhanced herbicides over rapidly spreading megafloora and megafauna infestation zones across North America.

Result: Mitigation efforts were initially successful, but proved only temporary. Local megafloora and fauna proceeded to absorb and adapt to latent radiation, then grow even faster than previously observed.
